EDUCATION

University of Pittsburgh-Johnstown **Johnstown, Pennsylvania**
Bachelor of Science in Computer Science *Expected Graduation, December 2026*

EXPERIENCE

Drive DeVilbiss Healthcare **Somerset, Pennsylvania**
Software Engineering Intern II *May 2026 – August 2026*

- Developed the Log Backup Service: a .NET Windows Background Service which runs on each production-line PC and uploads logs to a central location. The tool compresses logs by day into an archive as well as parses them and stores key lines in SQL server, where they can be keyword searched.
- Conducted R&D testing to simplify processes related to oxygen analyzer equipment, resulting in a production-time savings of a minute and a half for each unit.
- Integrated with the company's existing codebase and SQL database systems; authored FDA compliant documentation per internal standards. Provided programming support for various other internal tools.

Software Engineering Intern *May 2025 – August 2025*

- Built the Unified Sound Tester: a .NET application that consolidated three separate production-line sound testers into one system, reducing redundancy and enhancing operator experience.

GapVax **Johnstown, Pennsylvania**
Engineering Intern *June 2024 – January 2025*

- Created a tool to optimize the owner's manual creation process for GapVax trucks. Contributed programming support for the company's Enterprise Resource Planning (ERP) software.

PROJECTS

Multi-View Camera System (Directed Study) *May 2026 – Present*

- Designing the backbone for Pitt-Johnstown's XR laboratory in a directed study with Dr. Stephan Ohl of Pitt-Johnstown; a low-cost multi-camera system built from commodity hardware.
- Engineered a network cluster on a managed VLAN switch with isolated components. A dual-homed controller node acts as a gateway, provides DHCP and NAT to camera nodes.
- Automated deployments with Ansible. Entire deployment solution is containerized.
- Developing an OpenCV/Python library for synchronized image capture across nodes and per-node status monitoring.

Helpdesk Shift at Blackington *March 2026 – April 2026*

- Created an in-browser game starring my professors served by a Node.js back-end. The server written in TypeScript connects to MongoDB, providing user accounts, JWT-based authentication and authorization, and a REST HTTP API.

ACTIVITIES & AWARDS

Computer Science Club (Pitt-Johnstown) **Johnstown, Pennsylvania**
President *January 2026 – Present*

- Led the club through the most complex time in its history. Grew active membership from 4 to 20+ by organizing low-cost, hands-on events.

Calvary Church of Somerset **Somerset, Pennsylvania**
Technologist *April 2018 – Present*

- Maintain audio, networking, telephone, and IP camera systems for a two-century-old church.

Boy Scouts of America **Somerset, Pennsylvania**
Eagle Scout *June 2022*

- Earned Eagle rank; served as Senior Patrol Leader, Troop 152.

SKILLS

Programming: C#, TypeScript, Python, JavaScript, Rust, Java, C++, SQL, HTML, CSS, Visual Basic
Tooling: .NET, React, Azure, Microsoft SQL Server, GitHub, Docker, Node.js, OpenCode, Linux (Debian), Ansible
